PROFESSIONAL SUMMARY

AWS Cloud Engineer with hands-on experience in **Python, SQL, and AWS**, currently working with cloud services such as **EC2, S3, IAM, and VPC**. Skilled in cloud infrastructure setup, resource management, and basic automation. Familiar with distributed systems concepts and actively developing expertise in cloud architecture and deployment strategies. Gaining practical exposure through an AWS Cloud Internship, focusing on secure, scalable, and cost-efficient cloud solutions. Passionate about building reliable cloud environments and preparing for Cloud Engineering roles.

WORK EXPERIENCE

Scope Tech Software Solutions

AWS Cloud App Developer Intern (TN Skills) – Jan 2026 to Present

- Configured and managed AWS services (EC2, S3, IAM, VPC) for cloud-based environments, improving deployment efficiency by ~30%
- Implemented **secure access control using IAM roles and policies**
- Designed and configured **basic VPC architecture**, including subnets and networking components
- Deployed and tested cloud resources, reducing manual configuration effort by ~25%

PROJECTS

1. Cloud-Based Log Monitoring System using AWS and Python (Developing)

• **Project Objective:** Build a cloud-based log monitoring and automation system to collect, analyze, and manage server logs using AWS services and Python scripting.

• **Approach:** Designed and implemented a monitoring solution by deploying Linux-based EC2 instances within a secure AWS environment. Configured IAM roles and policies to enable secure access between AWS services. Developed Python automation scripts using Boto3 to continuously read application and system log files, detect warning and error patterns, and upload logs to Amazon S3 for centralized storage and backup. Automated periodic log monitoring tasks using Cron scheduling and planned CloudWatch integration for real-time monitoring and alerting. Implemented secure cloud infrastructure concepts including VPC networking and controlled access management.

• **Technologies used:** AWS (IAM, EC2, S3, VPC, CloudWatch), Python, Boto3, Linux, Shell Scripting, Cron Scheduling, Log Monitoring, Cloud Automation

2. Automated AWS Resource Provisioning System

Project Objective: Build an infrastructure automation system to automatically create and manage AWS resources using Python and AWS SDK.

Approach: Developed Python scripts using Boto3 to automate provisioning of AWS services such as EC2 instances, S3 buckets, IAM users, and security groups. Implemented reusable automation modules to reduce manual cloud configuration tasks and improve deployment efficiency. Added logging and validation mechanisms to track infrastructure creation and ensure secure access management.

Technologies used: AWS (EC2, IAM, S3, VPC), Python, Boto3, Linux, Cloud Automation

TECHNICAL SKILLS

Programming Languages: Python

Cloud: AWS (EC2, S3, IAM, VPC)

Databases: MySQL

EDUCATION

Course	Institution	Year
Bachelor of Business Administration (Aviation & Ground Handling)	Bishop Heber College	2021 - 2024
HSC	Syed Ammal Matric Hr Sec School	2020 - 2021
SSLC	A.V.M.S Matric Hr Sec School	2017 - 2018
